

FIBRANUSA

SUSTAINABLE BY NATURE

BANANA BIO-LEATHER

FROM WASTE TO WONDER

Transforming agricultural by-products into meaningful, everyday products — designed in Singapore, handcrafted in Indonesia.

VALUE WHERE OTHERS SEE WASTE

Fibranusa transforms banana agricultural by-products into bio-based materials and thoughtfully designed lifestyle products.

Every banana harvest leaves behind sheaths and stems that are usually discarded. We see a raw material. Working with growers and craftspeople, we prepare that fibre, develop it into a workable sheet material, and cut and stitch it into pieces people carry every day.

Our mission is to turn what is often treated as agricultural waste into products with greater value — combining sustainability, craftsmanship, functionality and Indonesian creativity.

The result is a range that stands on its own merits: warm in the hand, hard-wearing in use, and honest about where it comes from.

We do not ask people to buy something for the story alone. The piece has to earn its place first — the story is what makes it worth keeping.

Products across five collections

3

Signature colours: Natural Brown, Green, Black

25 pcs

Minimum for logo customisation

Handwoven panels and bio-leather trims — each piece finished by hand.

WHAT IS BANANA BIO-LEATHER?

A plant-based material developed from banana-derived agricultural material.

Banana bio-leather offers an alternative material pathway for products traditionally made using conventional leather or synthetic materials. The fibre is cleaned, prepared and built into a flexible sheet that can be cut, stitched, embossed and finished using the same craft techniques a leather workshop already knows.

HOW IT BEHAVES

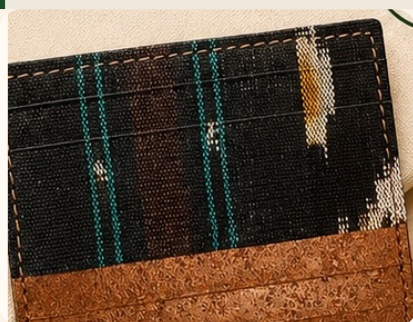

- Light in the hand, with a soft matte surface
- Takes embossing and debossing cleanly
- Stitches and edge-finishes like a traditional hide
- Available in Natural Brown, Green and Black
- Pairs with handwoven banana fibre panels for texture

WHERE WE USE IT

- Small leather goods — card holders, key holders, pouches
- Office and desk pieces — notebooks, lanyard ID holders
- Travel pieces — passport holders, luggage tags
- Corporate gifting and branded merchandise

HOW WE DESCRIBE IT.

We call our material banana bio-leather or banana-based bio-material — never "vegan leather" — because that term implies a certification we have not yet completed. We describe only what we can stand behind, and we will publish test results as they are completed.

Woven ikat panels, bio-leather sheet and hand-finished edges.

FROM THE FIELD TO THE FINISHED PIECE

Five stages, each one handled by people who know the material. Nothing is rushed between them.

01

BANANA AGRICULTURAL MATERIAL

Sheaths and stems left after harvest are collected from growers — material that would otherwise be discarded in the field.

02

FIBRE PREPARATION

The raw material is cleaned, separated and dried until the fibre is consistent enough to work with.

03

MATERIAL DEVELOPMENT

Prepared fibre is built into a flexible sheet material and finished in our three signature colours.

04

CUTTING & CRAFTING

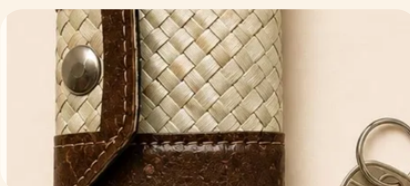

Patterns are cut, panels are handwoven where the design calls for it, and each piece is stitched, riveted and edge-finished by hand.

05

FINISHED PRODUCT

Quality-checked, packed and — for gifting orders — boxed with a ribbon and optional initials or logo debossing.

Lead time for standard orders is 1–2 weeks. Customised and bulk orders run 3–4 weeks from artwork approval.

Cut, stitched, riveted and boxed by hand — stages four and five.

WHAT WE WORK ON, STATED PLAINLY

AGRICULTURAL WASTE UTILISATION

Our raw material starts as a by-product of banana farming rather than a purpose-grown crop.

BIO-BASED MATERIAL INNOVATION

We keep developing the sheet material — strength, finish and consistency improve with every batch.

LOCAL CRAFTSMANSHIP

Cutting, weaving and stitching are done by craftspeople in Indonesia, supporting skilled local work.

WASTE REDUCTION

Offcuts are planned into smaller pieces — keychains, tags and card holders — before anything is discarded.

RESPONSIBLE PRODUCT DEVELOPMENT

We design pieces meant to be used for years, not replaced each season.

VALUE FROM LOCAL RESOURCES

Material, making and finishing stay close to where the raw material grows.

ON CLAIMS.

We do not claim that our products are 100% biodegradable, zero waste or certified vegan. Those are testable claims, and we will only make them once we hold the testing and certification to support them. Until then we describe our process and let the material speak.

FIVE COLLECTIONS, EIGHTEEN PIECES

EVERYDAY ESSENTIALS

Heart keychain · Key holder · Woven key pouch · Zip key pouch · Card holder (Classic & Woven) · Strap holder · Glasses holder

FROM SGD 7.90

WORK COLLECTION

Small notebook · Small woven notebook · A5 notebook · Lanyard ID holder · Woven lanyard ID
